News of Interest for law-enforcement professionals • June 2024

Wow... the new BattleWHITE is BRIGHT!

We told you. White light in an even flood-like pattern for \$30 is a real deal. Includes a magnet for hands-free use.

But did you know that for a limited time you can get one FREE with qualifying orders?

Just place an order for \$200 or more. Then, just ask us **at the time of order placement** for us to toss in a FREE BattleWHITE and we'll do it!

Otherwise, if you get your order and there's no free light...and you call and

complain, "Where's my dog gone light?" then we have to go back in, issue a new order, get a box, type a label and put it on the FEDX truck... and then charge you probably \$10 in freight.

Place your order today!

Stati-Lift is coming back?

Dave Ives, CSCSA Retired, the well-known inventor of the Stati-Lift product recently sent us this reminder to pass on.

Paraphrased a bit from Dave's words: "I often ask CSI officers how they would get a dust print off a newspaper or other surface in your typical B&E scene...without exception, no one can offer a solution. Regular tape lifts won't work. Neither will fingerprint powder readily work. I demonstrate the use of the Stati-Lift product, and they are amazed. Especially when you hit it with some oblique lighting."

"I point out that a possible alternative is a \$900 electrostatic lifter. For most Departments, this is not a viable option. Stati-Lift is an

inexpensive, easy and effective method."

We agree. To give you the basic Google explanation, Stati-Lift is simply two sheets of foil film that when peeled apart, create static electricity. When placed down on a suspect surface, and smoothed out, it will attract the miniscule dust particles of a shoe print. Then, put the two film sheets back together. If you can't visualize any dust pattern lift, try hitting it with some oblique light. The BattleWHITE would be one option.

We think that more often than not, you will be pleasantly surprised. And you'll be saving a dog gone boatload!

Yes, Dave will be receiving a FREE Tracker t-shirt for his little reminder how to use his product.

If you have a little tip or reminder on how to best use a Lynn Peavey product, send us an email! If published, we will send you the same!

THE LYNN PEAVEY COMPANY 800-255-6499

Fiber Duster is the way to go!

We guess that you could go to the hardware store, and pick up a brush that says “better” or “best.” Dip it in our Powder In The Ruff cinnamon and vanilla fingerprint powder and see what develops.

We think you'll see pretty quick why we push

our individually hand-made Fiber Dusters. But it's the treatment the filaments get that set ours apart. Treated with a lubricity compound, ours create less friction with the evidence surface, yielding up to 40% better development. Plus if you want to, we treat it with a water-resistant coating.

Not interested? Go ahead and just order off the prison menu. Water, beans and vitamin-fortified mashed potatoes.

Like Tracker with a meaty steak bone...

Moms told us not to brag. Makes people feel uncomfortable. Jealous. Sometimes down-right nasty. We have learned, you should be humble in all that you do.

But then again, we have a marketing team. Their job is to let people know everything good that the company is doing. To celebrate BIG wins and SMALL wins alike. Beat the drums loud and clear, from near and far.

A real conundrum. What should we as a company do? We took one glance at

Tracker, laying there in a dark corner, under a table, chewing intently on a big bone. He gave us the answer. We didn't notice him leaving his treat periodically, and coming over wagging his tail, howling, then going back.

Suffice it to say, we have been graced with some huge orders lately, of which we are exceedingly grateful. If you read this humble little note, celebrate with us and ask for a FREE bottle of Sludge. Just for asking! Come on, we won't bite!

Free is free.

Tracker, our trusty old bloodhound mascot has gone missing!

Foul play, or just horsing around?

Causes us to get a little teary eyed though just writing this. We have sent out thousands of APB videos, website and social media posts. Lot of tips and leads, still no Tracker.

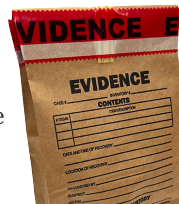

Follow us to receive the latest 1-2 minute video updates from Doug Peavey. Doug seems to be hanging strong and determined through the search...and has gone to as far away as El Salvador, Egypt and Saudi Arabia as well as across the U.S. looking for him.

A bad situation is another's windfall...

Who would have thought one of our most recent products, the Roll-N-Seal Kraft Evidence Bag closure was born from a barf bag on an airplane. The comments and emails are all almost unanimous...”Great product...wish it

was around years ago... saves me a ton of time taping...etc.”

Simply fill the bag, roll the top down, and seal!

I loaded up my Jeep...

And drove to the AAFS show several weeks ago in Denver, Colorado. Show was great. Afterwards, it got interesting.

Drove way up into the snowy mountains by myself. Took a 60lb pack, snowshoes and my down sleeping bag, but no tent. I planned on finding a spot to dig a snow cave and spend the night. What could go wrong?

First challenge out of the gate, I couldn't lift the heavy pack. So, I managed to hoist it on the tailgate, backed into it, and slipped in that way. Probably should have quit right there.

Snowshoeing for a couple of hours, I quickly gained altitude. I had this monkey on my back that I couldn't remove, so I rested every 20 minutes or so, leaning over clutching my knees. Just lingering long enough to drink some water and stay well-hydrated. Google says people die of dehydration in the wilderness before starvation.

Looking at my Timex watch, I did some quick math and felt the familiar pang in my gut. I needed to start looking for a place to dig my snow cave. 1 person needs about 5-6 hours to dig a decent snow cave. I soon settled on a spot and started digging. And digging. And digging. If you are careful, you can cut perfectly square blocks of snow with a regular hand saw. Pretty cool.

All the while, I tried to stay super hydrated.

Three or four hours into the dig, I discovered I could have found a better spot than I did. The sun was fading fast and the bitter cold was creeping in. I

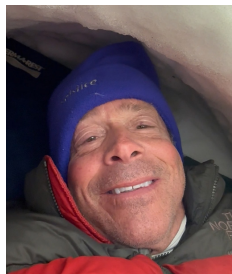

wasn't about to put that 60lb monkey on my back again, so I decided to make do. I had to carve a sleeping area with almost no head room, and as it turned out, 12" too short.

I managed to stuff my sleeping bag in the little hole in the mountainside. Yes, I remembered to cut a small airway in the roof with a ski pole so I wouldn't suffocate myself.

It took me about 15 minutes to squeeze into the cave. Once in there, I was determined not to come out until morning. An empty screw-cap 32oz water bottle was by my side for relieving myself. Remember, I was super hydrated. The bottle had this little internal cap I inadvertently forgot to remove. The warmth that I was feeling was not from the bottle walls. I knew it wasn't me bleeding, so it had to be my worst nightmare. I had now to deal with a wet sleeping bag in 10-degree weather. Fear of surviving did cross my mind.

Enough said. I did not forget to remove the internal cap the next time, or the next, the next or the next.

God was watching over me though. I am sure He was watching in amazement, wondering why I put myself through such situations... and do it time after time. Am I the only one doing crazy stuff?

Forgot something?

Like um, a scale in your photo? If you did, it'll most likely going to come back around and bite you in the butt in court.

Don't make a rookie mistake. Buy a supply of Scale Marqs and be prepared. A pack of 20 will fit in a pocket if need be. With or

without adhesive for sticking on vertical walls (works great for denoting blood spatter.) Product specs and pricing details are found on our website.

A CSI in Colorado is benefitting from his invention. Just bought a horse farm and a boat.

New CCC Cartridge Casing Collector!

Here is a great little tool that will come in handy collecting brass casings found at a shooting scene. Best thing is, it picks up the casing while preserving the touch DNA and fingerprinting processes. Developed and manufactured by a guy who is an active Crime Scene Technician.

Help us make another millionaire...order tons...and he will be on his way to riches! Details at lynnpeavey.com.

Defective Latches on Fingerprint Kits?

Out of the hundreds of thousands of Peavey fingerprint kits out there, we got one where the latch "malfunctioned." Actually, the latch worked too well. Once closed, it wouldn't open.

Greg Ebeling (nearly 40 years in) took the complaint call. He went back in production and tested a latch for himself. Go ahead, call him a wimp, but he had difficulty opening them by hand.

As it turned out, the case of the malfunctioning latch was solved. The latch can be opened by simply using a ball-point pen under the latch. After a few cycles the latch worked much better.

At least we know that the latch is not too loose. Then we'd all have some real problems!

Have an idea?

Let's work on it together and commercialize it! Contact Doug Peavey and explore the subject together!

We'll beat anyone's advertised price! It's that simple. Give us a chance – and we will absolutely convince you!
